

## TrueVue® AUTOMATIC ALIGNMENT SYSTEM

Q4's market-leading, automatic alignment system, TrueVue®, ensures a highly accurate, fully optimized visual display image for each and every training experience.

TrueVue® calibration is a totally independent operation, enabling integration with any make, model, or variant of image generator and projector and takes only 30 seconds per channel.

TrueVue® meets or exceeds the requirements of the highly demanding ICAO Edition III geometry criteria. Using 'single button' automatic alignment calibration, highly accurate and repeatable warping, edge blending and color balancing can be initiated following each and every training detail, if required.

TrueVue® significantly reduces the time required to install and commission projection equipment, as well as enabling considerable reduction in display system maintenance life cycle costs.

TrueVue® is infinitely scalable, has built-in redundancy and unmatched performance.

- reduce maintenance cost
- ease of operation
- image generation and projector independent
